SUMMARY

BSIT graduate majoring in Information Security with hands-on experience supporting enterprise infrastructure and end users on an active BPO production floor. Skilled in operating system imaging, network cable termination, IT asset lifecycle management, and access control administration. Combines practical technical troubleshooting with a security-first approach to maintain high system availability and ensure data integrity across organizational workflows.

SKILLS

ICT Infrastructure & Systems

Workstation Provisioning & Imaging (Rufus), Windows 10/11 Deployment, Hardware Diagnostics & Assembly, IT Asset Auditing & Inventory Tracking

Network Administration

Structured Cabling (Cat5e/Cat6 Termination, RJ-45), Cable Continuity Testing, Local Area Network (LAN) Troubleshooting, Basic TCP/IP Configuration

Access Control & Operations

User Account Management, Password Resets, File/Share Permissions, Helpdesk & Ticketing Support

Software & Security Systems

Zero-Trust Architecture Principles, Database Administration (MySQL), Web Application Development (Laravel, React, NextJS), Version Control (Git and Github)

EDUCATION

University of Southeastern Philippines – Obrero Campus Bachelor of Science Information Technology
Major in Information Security Davao City • 2022 – 2026
Academic Honors: Dean's Lister (S.Y. 2023 – 2026)

EXPERIENCE

Concentrix Corporation Davao City, Philippines
Basic Technical Support Intern June 2025 – December 2025

• Maintained 100+ production workstations across a 486-hour internship, executing scheduled hardware diagnostics and system maintenance to achieve 98% machine availability.
• Provisioned and standardized OS builds across 30+ desktop endpoints using bootable installation media (Rufus), reducing workstation imaging time from 45 to 25 minutes per unit.
• Fabricated, terminated, and tested Cat5e/Cat6 network patch cables using RJ-45 crimpers and continuity testers to maintain floor network connectivity and minimize workstation drops.
• Audited and logged an inventory of 150+ ICT peripheral assets, restoring 25 tested units to active deployment reserve to prevent replacement procurement costs.

PROJECTS

StegoLock – Secure Digital Document Storage Platform 2024 – 2026
Backend Developer

• Designed and implemented backend architecture for a cloud-based document protection system using Laravel (PHP), MySQL, and React, incorporating zero-trust and Reconstruction-Dependent Security Model (RDSM) principles.
• Built access-controlled RESTful API endpoints and structured database schemas to handle document partitioning, verification, and protected storage.
• Awarded 3rd Place, Best Paper Presentation (IT-IS Cluster) at the Research Colloquium 2026

Queuing Management System 2024
Full-Stack Developer
• Developed a full-stack digital queuing system to automate intake workflows, track service timestamps, and reduce physical counter congestion.
• Engineered database schemas in MySQL to record agent status, transaction durations, and queue performance metrics.

CERTIFICATIONS

Professional Level Passer (Paper and Pen Test) August 2025
Civil Service Examination (CSE)

3rd Place, Best Paper Presentation (IT-IS Cluster) 2026
Research Colloquium 2026
